CSS 2 Exercises

Sep 13

In the following exercises, I am suggesting some colors to you, don't stick to the mentioned colors, but use whatever color fits the theme of your website.

Exercise 1 (Mood-board)

Create a mood board using a word document (or any other text editing tool) that has the following components:

- Colors (a set of colors you will use in your website)
- Images examples (some examples of images to show the style of imagery used in your website)
- Fonts (Google fonts is a good starting place)
- .. any additional component you feel will help in making design decisions

Exercise 2 (Basic Selectors)

Go to your website (or use the blank.html file found in the exercise files) and perform the following CSS styling:

- Change all header cells of your table to uppercase
- Change all links to green color
- Go to your table cells and give top values cells a class of "top"
- Change all cells back-ground color "top" to red gold color
- Go to your paragraphs and add <em> elements to 2 words/phrases that you want to emphasize
- Change the background of any <em> to blue
- Give one of the <em> elements an id of "the_most_important"

- Change the element with id "the_most_important" to all caps and gold background.

Exercise 3 (Advanced Selectors)

Go to your website (or use the blank.html file found in the exercise files) and perform the following CSS styling:

- Change all h2 fonts family to sans-serif
- Capitalize all headings of any level in your code
- Change the first paragraph's letter after any h2 to x-large;
- When someone hover over any of your table rows change the background color to a light color of your choice and if the cell has previous color change it also.
- If you did not add a navigation bar to your web page, add it now
- Change the list items display of the navbar to inline
- Change the link of the first nav item to underlined and the others without
- Use nth-child to make all table's body rows background colors alternating
- When someone highlights a text in your text, change the highlighting color to a color of your choice
- When someone hovers over your webpage body links (not nav) change the cursor to a pointer
- Change all input fields height to 20px;
- Change the border color of all inputs of type text to light gray
- Change input of name message height to 50px;
